

Saving planet Earth one home at a time
DRD Enterprises inc of Davie

Builder designer of monolithic concrete dome homes since 1979. If only I had data to show that NEVER in history had a metal quonset hut been damaged by a wind event I would have stopped using environmentally unfriendly concrete years ago. Only till the virus of 2020 was I educated about the strength of metal quonset huts, forgetting that the strength of a building comes from the shape and design.

Storms are becoming enormous and only those structures that can withstand extreme stress will survive. DRD Enterprises inc of Davie business plan today is to offer Florida homes that will not blow away and can be erected within week! Both of these facets should lower or eliminate (DRD Enterprises inc of Davie financing no home insurance required) homeowners insurance and the cost of new homes.

Encapsulating the exterior with closed cell foam reduces energy use by 70% this will allow hut homes to produce more energy than being used!

Solving the low cost housing problem in Americas plus living much more independently is the business plan. Homes with no home insurance, homes receiving checks from utility companies, homes utilizing composting toilets, future of human fecal disposal NEVER spoken about to clean the waters worldwide. Each step taken will begin the path to saving planet Earth. What BIG BUSINESS does not want the public to know about!

DRD Enterprises inc of Davie believes that ONLY by change can the future be reached and feels that waiting for the next major disaster to make change is illogical. Additionally quonset huts are flood proof and earthquake proof NO bearing walls and by design no flood water resistance, reduce resistance you gain in strength.

This is the mission of my company to save planet Earth one home at a time.

ONLY company in America offering homes of the future today.
Cordially
