

Shorepower DCFC-BEST

Shorepower Technologies is a certified minority owned business enterprise. Our market focus: disadvantaged communities wanting to pave the way for affordable EV charging. We have helped push and participate in the evolution of transportation electrification.

Our challenge project will develop a DCFC EV charging system using a modular transportable container unit with the Battery Energy Storage Transportable (DCFC-BEST) technology.

- ★ DCFC-BEST solution will require less grid power and demand charges, and no utility upgrades.
- ★ Can be installed using existing 120/ 240V service, without upgrade to a 480V 3-phase.
- ★ The system uses recycled EV batteries to give them a second life application.
- ★ Options include Grid-Tied, Off-Grid (solar or wind), and Hybrid configurations.
