Lifting up East Boston and Mattapan

VinciVR Inc, the City of Boston, and UMass Boston are introducing green energy certifications to the historically marginalized communities of East Boston and Mattapan. The courses will integrate Vinci's Virtual Reality training to provide further upskilling ability and make participants more attractive to employers.

East Boston and Mattapan are working class neighborhoods whose populations are predominantly Latino/a/x and African American.

The goal of the program is to bridge these communities with the clean energy industry by providing high quality training enhanced by VR technology and industry recognized certificates.
