

CALWAVE

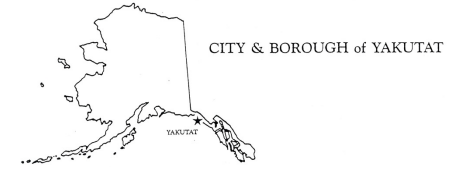

CalWave is a developer of wave energy technologies whose goal is to help remote communities take control of their clean energy futures. Their technology maximizes performance and minimizes cost by operating near the surface with the ability to shut down and shelter during storms.

REAP | Renewable Energy Alaska Project

Renewable Energy Alaska Project (REAP) is a non-profit organization dedicated to increasing the development of renewable energy and energy efficiency in Alaska through collaboration, education, training, and advocacy.

Yakutat is one of 19 organized boroughs in the state of Alaska, and the city of Yakutat must import diesel fuel to power its generators. Not only is Yakutat therefore energy dependent and reliant upon high-emission energy sources; it also must pay a premium to import its fuel over long distances.
