

## Scaling workforce preparedness to meet U.S. EV charging needs

The Los Angeles Cleantech Incubator (LACI) will collaborate with **ChargerHelp!** to scale workforce readiness to meet rapidly expanding U.S. EV charging needs by launching the nation's first multi-manufacturer **Electric Vehicle Supply Equipment Maintenance Training Facility** for EV charging infrastructure diagnostics & maintenance in South Los Angeles.

Since 2011, LACI has been creating an inclusive green economy by unlocking innovation, transforming markets, and enhancing communities. LACI's startup business support and workforce training programs increase access to capital and drive diversity in green jobs.

ChargerHelp! was founded by Kameale Terry and Evette Ellis, two of only 100 Black women in the U.S. to raise \$1 million or more for their venture. The company's mission is to increase the uptime of EV charging stations to ensure mass EV adoption.

**Together we will train the workforce of tomorrow and help to ensure an equitable future with high-road green jobs, reliable zero emission transportation, and clean air and clean energy!**
