

Role: Inform the program structure, curriculum, and certifications that meet their labor requirements and internal DEI objectives.

Role: Be the collective voice for disadvantaged community members—informing program structure, recruitment methods, and serving as liaisons.

Role: Advisors on program curriculum, the technical and scientific knowledge required to ensure safe and effective workplaces, and providing program accreditation.

**Project New Worth** is a workforce development initiative that will address the significant talent and diversity gap in the clean energy sector by launching an innovative, collaborative, and highly integrated “Foundry” and creating a bridge that connects disadvantaged communities to the businesses, careers, and wealth-creation opportunities that will abound from the global energy transition—and in turn, fueling the growth of the American clean energy infrastructure.

### The 3 Pillars of Project New Worth:

1. **Collaborative Development:** Industry, Community, and Institutional partners will contribute equally to the New Worth Foundry program creation.
2. **Integrated Framework:** Improve access by offering multiple pathways for disadvantaged communities to engage with clean energy careers and opportunities.
3. **Advanced Learning Technologies:** Employ existing and emerging tech to deliver unprecedented access and deep learning experiences.

### Why Team Project New Worth?

- 20 years of collective experience working within and for disadvantaged communities, developing and executing programs that create change from *within*.
- Executive-level startup experience in the clean energy and advanced technology sectors.
- Proven results in creating skills development programs for clean energy teams and workforces.
- Demonstrated ability to take complex and community-focused ideas from concept to completion.
- Women-led initiative, with diverse backgrounds that will lead with utmost integrity, serious grit, and big hearts.
