

RESILIENT AND RENEWABLE ISABEL SEGUNDA PROJECT

Community Through Colors is a community 501(c)(3) working to address food and energy insecurity in coastal Caribbean communities. This project will accelerate the deployment of microgrids in Vieques, Puerto Rico, to rural and disadvantaged communities, community service centers, and local businesses to increase distribution capacity for essential services such as food, energy, and communications. Project activities will demonstrate an innovative approach to transforming community networks into a renewable energy ecosystem.

Relief. Recovery. Resilience.
