

CLIMATE SMART EDUCATION PARTNERSHIP

Climate Smart Education Inc

Our mission consists of developing and implementing a modularized clean energy curriculum that will provide students and communities with an invigorating opportunity to grow their foundational skills in clean energy application by engaging in a project-based contest centered around sustainable small-scale agriculture in the form of a community garden/greenhouse. The modularized curriculum will provide a foundational knowledge to encourage ongoing interest and participation in both clean energy education and in locally sourced food centered around clean energy agricultural practices.

Our team is built with a network of dedicated and passionate educators in collaboration with field and industry experts. We aim to partner with community, tribal, and school organizations to bring our mission into fruition.
