

Climate Smart Manufacturing Inc

Our mission consists of developing and implementing a modularized clean energy curriculum that will lead students and communities into a sustainable manufacturing opportunity utilizing locally sourced and readily available biomass. Our goal is to unite disadvantaged communities around a common goal to produce locally manufactured goods (such as pallets, cross bars for utility posts, firesticks, etc.) in a sustainable manner that encourages clean energy practices while providing a foundational educational experience with real-world implementation along the way.

CLIMATE SMART EDUCATION PARTNERSHIP

CLIMATE SMART ENVIRONMENTAL WELLNESS WHEEL

Our team is built with a network of dedicated and passionate educators in collaboration with field and industry experts. We aim to partner with community, tribal, and school organizations to bring our mission into fruition.
