

Tribuquent, a non-profit organization, is on a pioneering mission to connect Tribal Nations and disadvantaged communities to a sustainable future. Advancing equity and inclusion is a cornerstone of our operations where we have created a path for native Americans and disadvantages people to become part of technology developments. With a steadfast commitment to sustainability, innovation, and community empowerment, we aim to be at the forefront of addressing climate change through technological advancements.

Our Minimum Viable Program (MVP), TerraEpic, is designed to fill gaps by offering targeted support to energy startups, with a current emphasis on Direct Air Carbon Capture (DAC) and through this new proposal support new projects in green hydrogen, solar energy, carbon management, biomass, storage and sequestration technologies and related products. We will offer:

- Specialized mentorship programs, (Endeavour, Techstars, etc..)
- Access to state-of-the-art research and development facilities
- Networking opportunities with key industry players.
- Financial support mechanisms including grants and investment readiness programs with emphasis on SBIR/STTR applications.

TerraEpic is partnering up with four National Labs:

- NETL
- Sandia
- Pacific Northwest National Labs
- NREL
