Revise Robotics

Pioneering a more **circular electronics industry** through **intelligent robotics**

We are using **cutting-edge computer vision models** to identify various electronics devices, and developing **complex reasoning models** to allow an automated system to identify and sort devices that are worth refurbishing.

Our Computer Vision Software Identifying Devices

We provide the **financial incentive** to recycling centers, backed by **real time data**, to rescue devices that would otherwise be destroyed giving them a **second life**
