

Submission Summary Slide

- In our 7 year history we were able to repurpose lead-acid batteries that were shunned by US secondary smelters and turn that into a cash positive.
- We understand the dynamics and costs of selecting, field testing, and rigorously testing batteries, and giving them a 3 year warranty.
- We realize a 100%+ Gross Margin that can be a financial resource to help with Lithium Ferrous Phosphate (LFP) batteries costs.
- Based on past experience with lead develop an Stationary LFP Batteries repurpose solution in the market with a built-in financial mechanism to partially or completely covers the recycling LFP.
- WE CAN DO THIS, because we done it before, and can do it again!
