

we remanufacture textile samples to supply corporate buyers with ESG-impactful custom products

Profitable small-scale validated model

In 2023 90 of our upcycled pillows were purchased to furnish three buildings at Microsoft's Campus of the Future. Our product metrics provided supply chain transparency and positively contributed to their environmentally and socially responsible purchasing initiative. We generated a 60-100% profit margin and provided 100+ hrs of local work.

Fabric samples

Solutions urgently needed

New U.S. Extended Producer Responsibility laws require waste producers to find and fund a solution for collection and reuse of textiles.

Textiles contribute more to global warming than aviation and maritime transportation combined.

(UNFCCC, 2018)

Replicable system for a national problem

Our remanufacturing model can scale to operate from any of the 34 urban Design Centers nationwide.

The 3-partner upcycling model consists of a textile collection team, design/sew team, and sales operations team.

Supply chain connected by shared values

Sourcing supplies from other U.S. circular businesses ensures we all succeed together.

We support local nonprofits that use textile art therapy to help survivors of trauma, and advocate for environmental justice.
