

# BMore 4.0 Co-Op

We are a team of developers, builders, and community leaders working in tandem to build a scalable pipeline of energy efficient housing that replaces blight, creates jobs, and will eventually be leveraged for a better than net zero electrical energy production model. OUR SOLUTION can help resolve 4 major problems we see as interwoven:

## ENERGY EFFICIENCY & CLIMATE CHANGE

This existential threat needs to be addressed immediately and promises to make our many problems harder.

## ACCESSIBLE HOUSING

The housing crisis issue is acutely felt in both lower income and middle-to-low income households.

## BLIGHT'S NEGATIVE IMPACT

The vacants are both the symptom and disease of Poverty.

## WORKFORCE SHORTAGE

The construction industry's lack of semi-skilled laborers is a crisis.
