

# Autonomous Chemical-free Vegetation Management to Reduce O&M Costs

## Targeting Vegetation Growing Around Mounting Posts

*Left unchecked, weeds degrade plant power and cause premature infrastructure corrosion*

*Standard Practice Today: Broad Application of Herbicides*

*Expensive, Safety & Environmental Risks, leads to Erosion Damage*

Global Neighbor is working with Renu Robotics and Rixan Automation to develop a robotic arm, equipped with proprietary Directed Energy Flora Control technology, to **autonomously control vegetation around mounting posts, without chemicals**
