

# Empowering Wellness & Energizing the Community Through a Solar Sharing Program Model

**Project Overview:** The MLK Wellness Complex seeks to address the challenge of high energy costs and limited access to affordable and sustainable energy solutions by integrating renewable energy solutions in the form of solar panels into its infrastructure. Through the TXU Energy solar buyback program, excess solar energy generated by the complex will be donated to the TXU Energy Aid program with a 4:1 match, providing targeted support to low-income households burdened by high energy costs in the same zip code as the project.

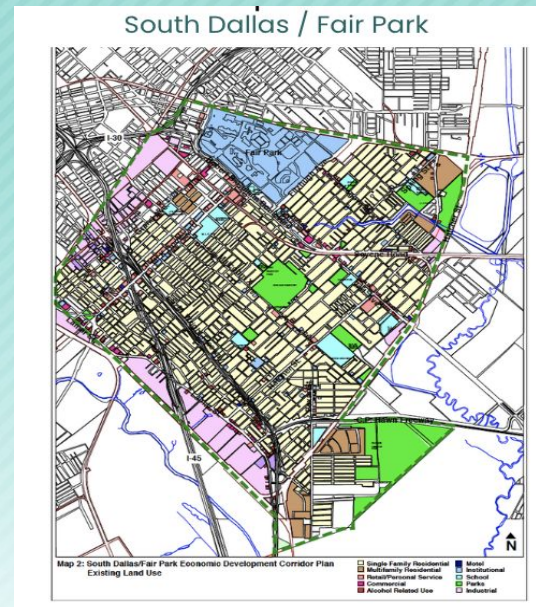

## Purpose:

The primary objective of our project aims to raise awareness about energy efficiency and sustainability within the community, empowering residents to reduce their energy consumption and lower their utility bills. By prioritizing energy justice and environmental stewardship, we strive to create a more equitable and resilient future for South Dallas.

## Empowering South Dallas: Transforming Communities through Renewable Energy Innovation

## The region:

## The Team:

Our team represents a unique blend of local knowledge, industry expertise, and a deep-rooted commitment to social impact. Made up of committed residents, advocates, and industry experts who are dedicated to transforming the South Dallas/Fair Park community. By leveraging our collective experience and resources, we are poised to deliver a transformative project that uplifts the South Dallas community.
