

# VOLTIC SHIPPING

**Climate Impact:** The maritime industry burns some of the dirtiest fuel on the planet. Solar presents a unique opportunity to eliminate 2.5% of global CO2 emissions.

**Novel Implementation:** Our patent-pending modular solar apparatus fit vessels of all sizes. We have build a 1/2 scale prototype of a single solar module.

**Business Viability:** Our ships eliminate the largest operating cost for vessels, fuel. We have letters of intent with four potential customers demonstrating interest.

**Data-backed Results:** Back-tested results using engineering software Ansys and Meteum AI weather data confirm we could have safely operated our planned route the past 10 years.
