

SOLVE-IT Warren is dedicated to improving our neighborhoods through the adoption of **clean energy technologies.**

We recognize that our neighborhoods face significant challenges, namely a lack of reliable and affordable access to energy resources. The City's legacy electric infrastructure often faces outages due to down trees and safety accidents. Moreover, the cost of energy and navigating the open market are confusing for consumers. We seek to deploy new technologies to address these issues through a **Community Pitch Day**, a local demonstration lab, and neighborhood partnerships.

The Prize team will address legacy infrastructure and the energy burden by demonstrating at the neighborhood-level new technologies for building efficiency and long-duration energy storage by utilizing BRITE's members and network.
