

# CREED (Climate and Rural Energy Education for the Disadvantaged)

C5's Project BLACC, in collaboration with FLIPP Inc, will spearhead an innovative endeavor within the rural landscape of Charles City County to catalyze workforce development and amplify solar energy potential.

This agri-voltaic initiative combines agriculture with sustainable energy generation, aiming to enhance local farming and promote energy self-sufficiency. This dual-faceted approach not only promises to invigorate local agriculture but also to illuminate the path towards self-sufficiency by harnessing solar energy, thereby creating substantial employment avenues and addressing the pressing issue of food insecurity.
