

# Dawn of a New Day

Creating a Bio-Circular Economy the regenerative way.

1. Friends of Waimanalo and Hawaii Agricultural Research Center Partner to create plans for Climate Resiliency projects for Hawaii's underserved communities and people.
2. Developing Renewable Energy Systems through solar and wind for Hawaii's Indigenous Farmers and Community Agricultural Space.
3. Reducing our carbon footprint by investing in Electric Vehicles and creating workforce development in Agriculture to develop future climate smart technicians.
4. Creating reforestation projects and implementing the creation and use of Biochar for healthy soils to promote our current regenerative farming practices.
5. Introducing Atmospheric Water Generators for our most remote farm areas powered by Solar providing water for livestock integration and remote farming.
6. To become the living proving grounds for our State and indigenous communities to be able to have a place to see these practices working and implemented by community organizations.
