Solar Makes Sense: Building Healthy & Resilient Communities in West Jackson

Our Plan for West Jackson

We will address two major issues:

1. The need for resilient renewable energy
2. The need for affordable quality housing

How?

Through the renovation of abandoned, dilapidated homes. Upgrading them to modern efficiency standards and installing our battery based solar systems. Also by building solar powered, climate resilient hubs, community spaces and gardens. Transforming an under-served area into a modern green thriving community

Completed conversion:
From an abandoned property to a solar powered home
