

Minneapolis District Ground-Source Heating Pilot

The Challenge

Exploring the use of district level ground-source heating systems that are centered around anchor sites (large buildings with significant thermal load and space to host thermal wells) but also reach surrounding homes and businesses in areas of Minneapolis which have been identified as disadvantaged.

Our Community

We are a statewide energy cooperative with hundreds of members across Minnesota. For this project, we will be focused on disadvantaged communities in Minneapolis.

COOPERATIVE ENERGY FUTURES
COMMUNITY POWERED ENERGY

Our Team

Cooperative Energy Futures was established in 2009 as a member-owned cooperative that makes clean energy accessible to all. Our programs help low-income households and historically marginalized communities in disadvantaged communities throughout Minnesota create climate solutions that are clean, local, and ours.
