

The Radical Resilience Group

Kimberly T. Henderson, PowerHouse CDE, LLC

Jerald McQueen, Phoenix Energy Systems

Sophia Howard, Divine Empowerment Resource Center

- Magical Miami Dade County, home to a diverse population and ground zero for climate change and the impact of extreme weather events. A fast growing and evolving city, whose amazing citizens many of whom descent from Latin America and the Caribbean face rapid rising housing, insurance, and energy costs and currently experience the highest inflation in the USA.
- Our solution will help low income, low wealth communities of color build upon their inherent resiliency with a solar based system that can help prevent loss of property, life, and health in the event of a power outage, natural disaster or extreme weather event.
- Our solution will catalyze BIPOC participation in the promise and prosperity of the clean energy revolution and serve as an important economic development tool for low wealth communities.
- Florida Memorial University
