

# VITRUVIAN

Vitruvian is building a 20-home residential community in SouthEast Ohio, using our innovative 3D Printing approach to provide housing for victims of relational trauma, participating in the Survivor Advocacy Outreach Program

The SOLVE-IT Prize enables Vitruvian to incorporate innovative energy solutions aimed at reducing energy costs, enhancing resilience, and improving sustainability for this residential complex, its community garden, and the surrounding Glouster area.

Our team is composed of Vitruvian, alongside experts in energy efficiency, community solar, hurricane-rated solar canopies and community-sized biomass energy systems.
