

Clean Energy Manufacturing

Mojave Microgrid Hub

This project aims to develop renewable energy infrastructure in Gardnerville, NV, by fostering economic growth and environmental sustainability in the region. Through strategic stakeholder engagement and inclusive planning, the project seeks to harness Nevada's abundant natural resources to drive clean energy innovation and job creation.

Micro-grid/Smart Equipment: Localized manufacturing of smart grid technologies: controllers (PLCs, SCADA), sensors (Anemometers, wind vanes, pyranometers) , and communication systems (RF, 5G).
