

# SAN ANTONIO DOWNTOWN RESILIENCY CORRIDOR

SA Resiliency is a team of San Antonians committed to a vibrant future for our city that honors our past and builds resiliency and justice. Our goal is to develop an expansion of the existing downtown central chilled water system that maximizes peak demand flexibility and reduces carbon emissions, while carefully considering climate equity. Along the chilled water route, we will include climate adaptation strategies such as cooling centers. We are uniquely positioned to collaborate and provide a community informed solution.

- San Antonio is a majority minority city with over 300 years of cultural heritage.
- In a high emissions scenario, our city is expected to see 94 or more days over 100°F.
- As demonstrated during Winter Storm Uri in 2021, our state power infrastructure needs demand flexibility.

## Partners:

- University of Texas at San Antonio
- San Antonio Water Systems
- City of San Antonio
- San Antonio 2030 District
