- Jessica Allen** Education • Civic Leadership • Political Economics • Business Strategy

EmpowerFi is dedicated to enhancing social equity in underserved communities like Acres Homes, Houston, once known as the South’s largest unincorporated African-American communities. Our team’s deep local connections will help address energy inefficiencies and high costs caused by substandard housing and poor infrastructure.

Key energy challenges in Acres Homes include:

- **Substandard Housing:** Poor infrastructure resulting in significant energy waste and high energy costs for community members.
- **Inadequate City Services:** Despite being within Houston, the community faces inconsistent city services.

Targeted Solutions

- **Energy Efficiency Upgrades:** Install LED lighting, energy-efficient appliances, and smart monitoring devices.
- **Renewable Energy Projects:** Explore community solar and wind energy initiatives.
- **Community Education:** Conduct workshops to educate residents on energy conservation and involve students in sustainability projects.
