

Good Energy

Our team comprises a dedicated principal at Brooklyn High School for Law and Tech who have been principle for 13 Years, an adept entrepreneur with extensive experience in securing government contracts, as well as experiences in securing financial aid for low income students interested in going to college or trade and the owner of a local solar roof company, all based in Brooklyn

- The community at the heart of the Solar Panel Education Initiative is based around Brooklyn High School for Law and Tech, located in the 11221 ZIP code of Brooklyn, New York. This area is characterized by its vibrant diversity but also faces economic challenges, with many families falling into the low to moderate-income bracket. The energy-related challenge identified here is twofold: the community deals with high energy costs and a lack of access to clean, renewable energy sources and education.
- To address these challenges, the initiative aims to introduce students to the solar energy industry through a comprehensive educational program that includes practical, hands-on experience. By partnering with a local solar panel business, the initiative seeks to not only reduce energy costs and promote sustainability but also empower students with the skills and certifications needed for future employment in this growing field. This community-driven approach not only tackles the immediate need for affordable energy solutions but also fosters long-term economic growth and sustainability by investing in the education and potential of its youth.
