

THE PROBLEM

The electric grid is changing rapidly, and utilities must continue to maintain affordable rates and a reliable grid as the grid undergoes this transformation.

SOLUTION

Qilo and Vermont Electric Cooperative (VEC) are proposing a real-time advanced meter infrastructure (AMI) data analytics dashboard to evaluate the current and future impact of electrification.

OUR MISSION

There are over 100 million households around the U.S. with AMI data.

Qilo's mission is to make AMI data as valuable as possible for utilities – so they can support electrification while maintaining affordable rates and a reliable grid for people at home.
