

Multi-Tiered Performance SGS (Secondary Glazing System)

QUANTA Technologies, Inc. a leading manufacturer and marketer of SGS products announces:

Team QUANTA 3.0

In 2012, QUANTA introduced the QUANTAPANEL 600 Series IGS. This product incorporates a patented technology for secondary, interior glazing systems that has been used to improve commercial building performance throughout the United States.

Team QUANTA 3.0 now seeks to develop and demonstrate new additional enhancements that will further improve the insulating performance, comfort, and cost of these innovative SGS systems aligned with the goals of the DOE Building Envelope Innovation Prize.

This flexible tiered-performance system includes different technical features (VIG, insulating frame trim cap, automated cellular shade) that can be optionally selected and combined to optimize different levels of cost and performance benefits for each building owner's situation.
