

JUSTUSED TECH.

Make a difference with your old devices...

JUST-USED

Problem Statement:

The current e-waste management system faces significant challenges in the effective collection and recovery of critical materials from used electronic devices, such as laptops. Valuable resources like cobalt, aluminum, and platinum are often lost or end up in landfills, leading to environmental degradation and the depletion of finite natural resources.

Solution Statement:

JustUsed Tech has developed an innovative approach to address the challenges in the collection and recovery of critical materials from used laptops. By optimizing the collection and separation of these materials, JustUsed Tech aims to create a closed-loop recycling system that reduces waste, conserves resources, and supports the transition to a more sustainable and circular electronics industry.

Capability Statement:

JustUsed Tech has the expertise and technology to efficiently collect and process used laptops and gadgets, enabling the recovery of critical materials like cobalt, aluminum, and platinum. The company's advanced separation technologies, strategic partnerships, and streamlined logistics ensure a comprehensive and environmentally-friendly approach to e-waste management.

Impact :

JustUsed Tech's innovative collection and recovery solution for used laptops will have a significant positive impact on the environment and the sustainable development of the electronics industry. The organization has hosted more than four successful e-waste collection events, gathering over 15,000 pounds of discarded electronic devices. These collections have diverted waste from landfills and provided the necessary feedstock for JustUsed Tech's innovative recycling processes. We still have six more upcoming collection events before the end of the year.
