

**It is estimated that 98% of the energy used in the Construction Industry is obtained from diesel.** Battery Energy Storage Systems (BESS) have recently been introduced to power jobsites but are still predominately charged by diesel generators.

Full Charge Solar's portable array is designed to charge these BESS with renewable energy and decarbonize the job site.

- Full set up and break down within 5 minutes
- Able to charge BESS from all manufacturers
- 3.7kW of solar per array, capable of producing 20kWh per day
- Infinitely expandable
- Small footprint allows up to five units on 20ft utility trailer, 10 units in 40ft shipping container.
