

Onchain Energy Network

An innovative **software platform** for cooperative ownership of renewable energy resources.

OUR MISSION

To make cooperative ownership of renewable energy accessible to all.

TEAM EXPERTISE

- Green Energy & Development
- Onchain Technology
- Commercial Real Estate
- Sales and Marketing
- Community Building

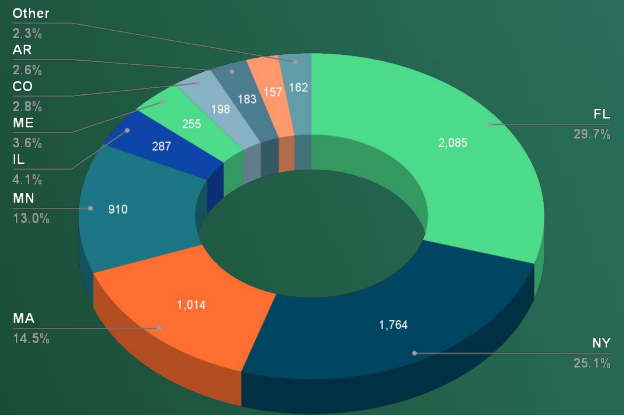

OUR BHAG (Goal)

To onboard 10 million renewable energy customers by 2030 globally.

Our platform fosters a multi-stakeholder environment, bringing together cooperative members, investors, local organizations, and municipalities to create community owned and operated renewable energy resources.

By capping investor dividends at **15%**, we ensure benefits flow directly to low & moderate income community solar subscribers and families.

Community Solar Installed Capacity (MW-AC)

Onchain Energy Network

powering communities, together

co-own and manage distributed energy resources:

- Solar Power
- Battery Storage
- EV Charging Stations

We create opportunities for underserved communities, such as Uber and Lyft drivers (#GigsGoGreen), who often face challenges in acquiring wealth-building assets.

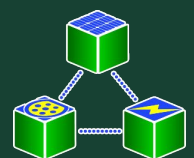

Through our software platform, they can break down barriers to ownership, co-own valuable energy resources, reduce costs, and build a greener, more financially secure future.

Roadmap:

- Launch Colorado as 1st state in 2024-Q4
- Cooperative Ownership (Patent Pending)
- Project Management (construction / etc)
- Community Solar Subscriber Management
- Multi-State Expansion (MN, NY, & IL) in 2025+
- Virtual Power Plants (management of DERs)
- PMP CEUs – create course(s) for Project Management Professionals for obtaining Continuing Education Units surrounding our business methods.

Join us in **realizing energy justice** through cooperative ownership.

Onchain Energy Network
powering communities, together.
