

SUBMISSION SUMMARY-AMERICAN-MADE SOLAR PRIZE ROUND 8

The solution would be to create software platform to simplify the development of community solar.
Our software solution would involve the following below.

- GIS mapping to find ideal community solar sites
- Preliminary engineering design to determine system size and production
- Provide current federal incentives and whether it would qualify for the ITC adders like energy communities
- State level incentives for community solar project
- Assist with understanding permitting and pilot taxes in that jurisdiction
- Create financial model for the project
- Provide assumptions for the net metering rate, EPC costs, and customer acquisition,
- Provide insight on other similar community solar projects in the area
