

r.World is the nation's leading reuse service provider.

r.World's QC Module

- A first of its kind application of Artificial Intelligence and automation to inspect durable plastic cups for reuse
- Utilizes mechanical features to convey and align cups for AI-powered visual inspection to determine cup condition. Then implements an action based on determination
- Dramatically reduces inspection time from 12-15 seconds per cup (manual) to just 2 seconds per cup (automated), providing significant operational cost savings
- Fully integrated QC Modules installed at each of r.World's seven Wash Hubs could inspect nearly 37 million cups annually!

Enabling Reuse as a Service with AI & Automation
