

Personal Resource Management tool designed to help consumers understand their possessions, enabling better end-of-life decisions for products. Promotes waste reduction, reuse, and repair, stimulating local circular economies.

Inventory Management

Effortless item tracking, social sharing capabilities, and planning the use of goods.

Future Enhancements

AI enhanced features, item sharing, API integration for product data, and a marketplace with social elements.

Community Impact

Simplifying the establishment of secondhand marketplaces and repair services by providing methodologies and affordable software.

Environmental Benefits

Significantly reduce waste and GHG emissions through improved participation in a circular economy.
