

Accelerating reusable foodware systems with the **best first sector for reuse infrastructure buildout: Arenas & stadiums**

Large volume anchor venues like arenas & stadiums create demand at scale to justify the investment and build out of wash, sort and redistribution hubs. A custom Chart-Reuse dashboard will allow venues to make the case, track results, and generate Requests for Proposals—providing the data-driven proof that can influence sector-wide change.

Re-X Phase 2 includes: Developing a dashboard in Chart-Reuse®—Upstream’s analytics platform for projecting and assessing the impact of switching to reusable foodware—specific for arenas & stadiums
