

Chicagoland Grid Modernization Manufacturing Ecosystem Roadmap

Building a resilient, inclusive, and thriving clean energy manufacturing sector in the Chicago MSA to foster economic growth, job creation, and environmental sustainability while addressing social and economic disparities

Project Goals

Deploy assessments, partnerships and technical assistance to inform place-based investment and regional strategies focused on supporting innovation, production and workforce to:

- Build a strong clean energy manufacturing ecosystem to produce innovative grid modernization technologies.
- Develop programs aimed at creating economic opportunity for disinvested communities through clean energy technology and manufacturing careers to address historical economic and climate justice inequities.
- Strengthen ecosystem partnerships between communities and industry to build interest and engagement, and community involvement in clean energy manufacturing.
