

# Resources for Public Dissemination

The **Green Leap Program** is a free self-paced roadmap with access to coaching and a marketplace of qualified contractors, service providers, resources, and tools. Although the GLP is “qualifying” manufacturers before entering the roadmap, its only purpose is to make sure they are a good fit and we fulfill their needs appropriately. Anyone is welcome to sign up. As we implement more automation and streamlined processes, the roadmap will become even more accessible and scalable.

## The Growing Sphere of Resources

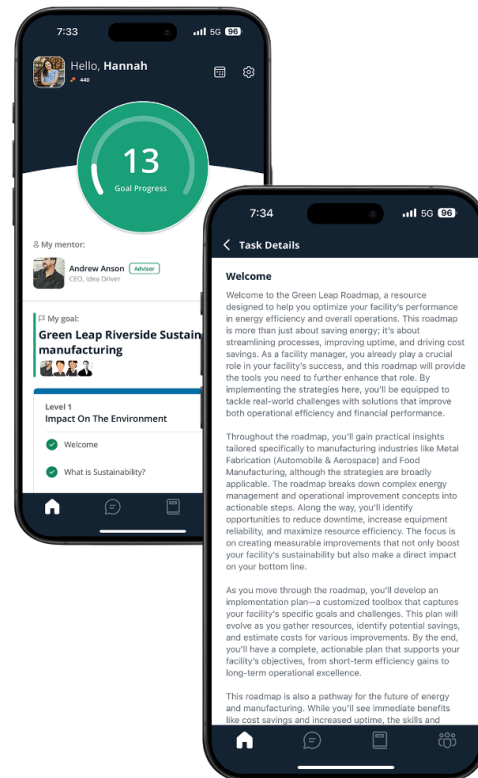

By collaborating with key partners in funding, advisory, contracting, and online tools, we are creating a robust resource network that enables manufacturers to access essential services for energy efficiency.

## Growing Ecosystem of Partnerships

By connecting with organizations across workforce development, manufacturing, academic, government, funding, advisory, and utility sectors, we’re building a comprehensive support network. These partnerships enhance resource accessibility to empower manufacturers.

### Dosen App

The Dosen App houses the roadmap and content. This images to the right are of two pages of the roadmap. The page on the left shows the home screen with a designated mentor, progress, and Levels of the roadmap. The page on the right show the First task, under Level 1: Welcome to the program and an introduction into what the users will be learning.

 Partners who have given referrals

## Growing Ecosystem of Partnerships

## The GL Community

The GL Community housed on Directrope is free to join and open to anyone. DirectRope is used alongside Dosen and community outreach events to advocate GLP and empower communities to make connections and share knowledge. The below image is of Eddie Konialian's profile to show the potential reach if joined.

## Example Profile on Directrope

## Website Resources

Housed on the Green Leap Program's website we also have a running blog and resource list accessible to anyone. Both are designed to educate and support the manufacturing industry in their sustainability journey. The blog covers key industry topics like collaboration, clean energy incentives, and rapid wins in energy efficiency, providing insights.

Complementing this, our resource list mirrors the resources available on the roadmap, offering a categorized collection of valuable links on renewable energy education, industry trends, energy efficiency programs, and professional networks.

**The Power of Collaboration: How Manufacturers Can Partner with Experts to Accelerate Clean Energy Efficiency**  
Due to soaring energy costs and increased regulatory pressures, manufacturers face extreme pressure to transition to sustainable practices. Today, transitioning toward clean energy efficiency is no longer a trend but an absolute necessity that demands collaboration from many.  
[Read More →](#)

**Unlock US\$1.7 trillion in Clean Energy Incentives for Manufacturers**  
This places the manufacturing sector at a decisive juncture, allowing it, for the very first time, to seize newly unlocked incentives for clean energy that can significantly reduce operational costs and create a more sustainable enterprise.

**How Energy Efficiency Can Transform Manufacturing: Rapid Wins for Near-Term Impact**  
Energy efficiency is no longer the buzzword it used to be in today's manufacturing landscape. Instead, it is a transformative force that can significantly enhance operational performance, reduce costs, and contribute to sustainability.
