

Minneapolis District Ground-Source Heating Pilot

Our Team

Cooperative Energy Futures was established in 2009 as a member-owned cooperative that makes clean energy accessible to all. Our programs help disadvantaged communities throughout Minnesota create climate solutions that are clean, local, and ours.

Our Community: Minneapolis, MN

Our community includes low income and BIPOC neighborhoods. We want all residents to have access to the energy transition.

Our Proposed Project:

Piloting a district geothermal system in Minneapolis, centered around an anchor building, and connecting to residences and buildings in the surrounding area.

COOPERATIVE ENERGY FUTURES
COMMUNITY POWERED ENERGY

Engagement with 199 Minneapolis residents revealed that our community wants...

- *Clean heating and cooling options*
- *A healthy environment for our children*
- *Cheaper energy bills*
- *Comfortable homes*
- *Community-centered program designs*
