

Improving Energy Resiliency For Michigan's Beaver Island

Michigan Tech Beaver Island Energy Resiliency Initiative

Jay Meldrum, Executive Director, Research Office

Chelsea Schelly, Professor

Social Science

Michigan Tech supports the efforts of Tara's Meadow, a non-profit, community-based organization, to enhance energy resilience on Michigan's Beaver Island for multiple years, through student projects, faculty and staff engagement, and building relationships for productive knowledge co-production. Beaver Island is a remote rural island with energy vulnerabilities associated with infrastructure, demographics, and climatic change. This project will enhance the capacity of partners to explore technical solutions that support community priorities for a more sustainable and resilient future for this remote and rural island community.
