

# SOLAR ROOF SHIELD

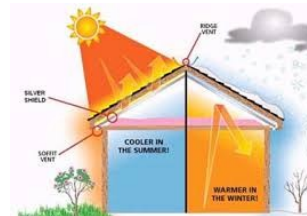

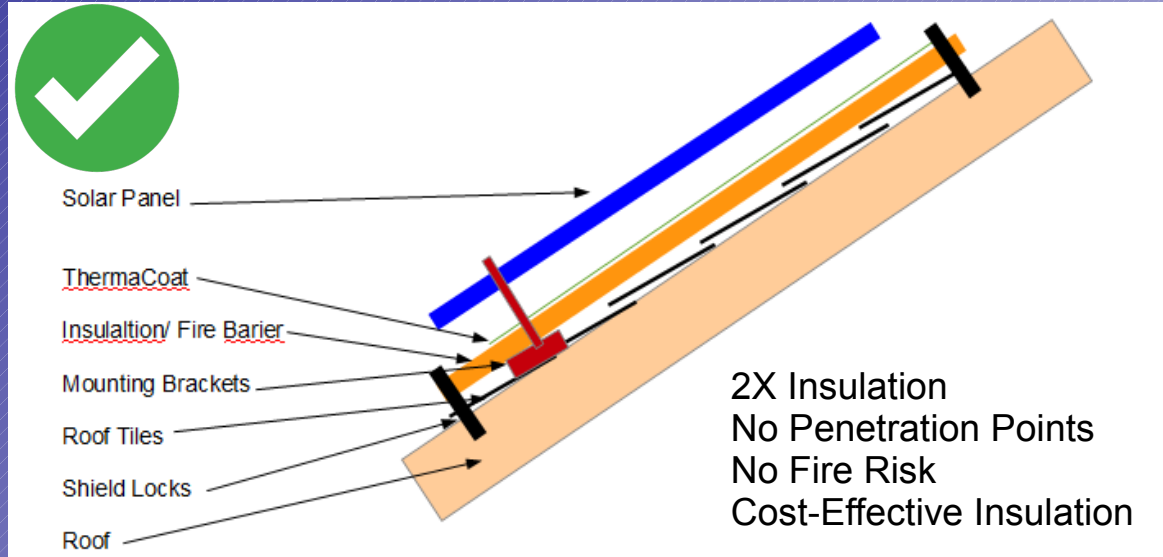

The “Must-Have” Roof Protection Barrier For Rooftop Solar

**Prevents Fire** – 1500f degree resistant fire barrier prevents fire to the roof and home

**Prevents Leaks** – Barriers includes pre-installed solar mounting brackets that do not penetrate the roof shingles

**Lower solar system cost** - Thermal reduction lowers need for solar offset. Less HVAC usage lowers number of solar panels needed.

**Cooler Home** - Two high capacity insulation technology substantially reduces heat entering home via the roof. The roof is the leading source of internal heat temperatures during the summer.

Increased Cost From Increased Home Temperatures Coming From Roof Heat

**Roof Leaks From Solar**

**Roof Fires from Solar**
