

THE MIGHTY POWER SYSTEM™

Clean, Transportable, Instant Emergency Solar and Battery Power

Where You Need It, When You Need It

Climate change has created more natural disasters, leading to grid outages.

Our standard two component system, comprised of the patented PPG solar array (1,200 DC Watts), and The Mighty Box® battery backup/energy storage unit (6.4kWh useable electricity) is:

- Prefabricated, prewired, plug-and-play, scalable, easy to use, rugged, and reliable
- Rapidly deployable for delivery, even to locations where vehicle transport is challenging
- Easy to move and set up by one or two people
- Operational in under five minutes without tools or special training
- Transformational with wiring conversion enabling PPG utilization during non-emergencies as grid-tied installations, providing end-user ROI by reducing electric usage and carbon footprint
- Ideal for first responders, FEMA, utilities, military, developing nations, private investors, and other government agencies and NGOs that provide disaster relief

There's Nothing Else Like It Under the Sun!
