Renter Solar Technical Assistance Request

RENTER SOLAR TECHNICAL ASSISTANCE REQUEST

A member of a national lab, private facility, and/or member of the American-Made Network could potentially help Credence Energy in these areas. One, developing a software/web app development with Genability API and a possible member that has experience with raising money and tax equity to fund Renter Solar's leasing operations. Two, tax-equity and raising capital for zero-down leasing operations. Three, there is also the possibility that we will have a member with political experience to lobby congress to enact a bill similar to CA CIVIL CODE § 1947.6(a), (b). Our state-to-state bill would allow Renter Solar to be installed at every allowable premise at the tenants' expense.

The app development would enable a Renter Solar prospect to go on their mobile device or computer and input their information, utility information, and kWh data, select a recommended system size (1 – 3 Renter Solar Units), self-qualify and electronically sign documents, and allow the new customer to upload pictures needed for the site survey. Once complete, a work order would be sent to a local installer in Credence Energy's network for installation. Credence Energy would also receive the work order so we know where to ship the Renter Solar units to and to develop plans/permits for the local building jurisdiction.

An expert or company in tax-equity raising is needed as most tax-equity investment firms are focused on large commercial scale (100 kW +) projects. With Renter Solar, we will pool many smaller projects together (securitization) to make up one large transaction. The pooled leases may be sold off into a secondary market or kept on Credence Energy's balance sheet. If we choose to bring in an expert in finance, we ask that that person have a background in IPO roadshows as we will more than likely go public after we have exhausted our money-raising opportunities in the private

sector. Credence Energy does have other innovations in our company development pipeline, and we plan to never stop innovating.

An expert in political lobbying may be needed as a bill that would mandate that a landlord accept the request of the Renter Solar installation would make our company flourish in the states where the bill passes. Even though we don't believe a landlord would have a problem with the Renter Solar system installed at their premises, as the tenant takes on the financial responsibility and Credence Energy makes any necessary repairs to the property (minor stucco patch), the political bill enactment would make it easier for everyone.
