

Technical Assistance Request: Project Griffin the portable solar microgrid.

Travel to various American-Made network partners would be a top priority to make version 2.0 of Project Griffin a reality. The following would be priority implementations:

- Showcasing hands-on sample product from previous prize winning teams.
- Creating a more efficient charging display setup which could be live streamed 24/7 by the public.
- Schedule and plan speaking engagements and/or events to showcase the project with local sponsors.
