

Title Help save our Ecosystem with Solar, fluid energies

Key Players

- Jack O. Walden Sr. – CIO / Owner / Inventor
- Jill Stepke – Business Manager
- Megan Marks – Financial Manager
- Kourtney Brewster – Technology Manager
- Parth Goswami – Architectural Design Engineer
- Richard Helou – Control Design
- Laarak Labbafi – Photovoltaic Power Plant Design Engineer
- Edward Lavi – Photovoltaic Power Plant Design Sales & Marketing

Power to be harnessed

Sustainable Power Machine

Save the Planet

Walden's Greenergy Solar, LLC

Walden's Greenergy Solar, LLC can better harness the power of solar energy and provide more efficient usage with its novel and innovative designs. Sunshine is half light and half heat, and both can be utilized with hot and cold mirrors, plus, it can generate electricity using solar cell modules.

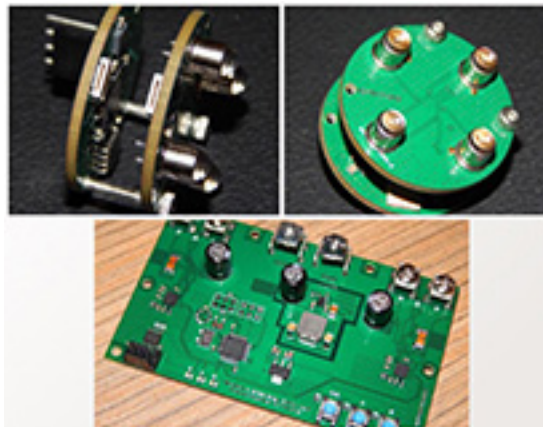

Business Strategy

It is the intent of Walden's Greenergy Solar, LLC s to make the patented control system available for worldwide use to the achievement of societal and relevant outcomes.

Business History

The control system has the patent number 8,710,414. The control system can also be used to harness wind and hydro (both wave and tidal) power. The existing prototype needs final upgrading, and the control system can outperform other platform control systems currently in use by 20% to 40%. Independent Contractors are under contract to Walden's Greenergy Solar, LLC. Products - Patented control system device. - Novel solar platform design.

Existing Prototype

Fluid Power
