

Earthwave Renewables

Solar Roof

Residential Market Viability

Residential solar currently makes up approximately 23% of US solar installations in 2021. The residential solar market in the US is poised to grow by USD 5.99 billion during 2021-2025 period, progressing at a compound annual gross rate (CAGR) of over 10% during the forecast period.

The Earthwave Renewables Solar Roof, which will utilize in-tandem perovskite and silicon technology, will be an industry disruptor and revolutionize new and existing residential building practices.
