

Democratizing PV Monitoring and Asset Management at Community Scale

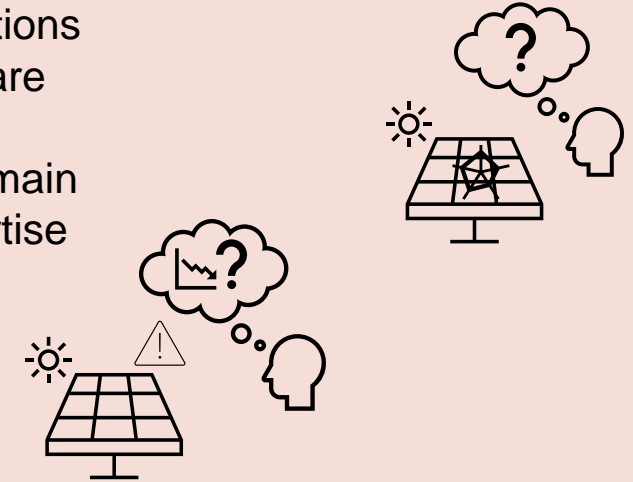

Traditional: Power Utilities

- Large financial resources
- Fully-staffed monitoring centers
- Sophisticated models

Opportunity: Individual and community solar installations

- Decentralized hardware
- Lack of resources
- Limited access to domain knowledge and expertise

Solution: Bring experience from traditional monitoring practices to a community monitoring platform

- Centralize data collection and access
- Centralize performance analysis
- Distribute insights to the community

Turbine Logic:

- Synergistic merging of deep domain expertise with AI for physics and data informed decision support
- Experts in digital twins and advanced analytics
- Experience integrating solutions into utility M&D processes
