

## Illuminate your distributed solar O&M

### THE PROBLEM

Distributed solar system developers and operators have a hard time managing maintenance on remote assets with a remote field team. Field technicians have a hard time finding and documenting maintenance knowhow. This, compounded with communication misalignment, causes confusion and slow resolution time.

### THE SOLUTION

Illu is a field work management system to makes it easy to aggregate and share O&M knowhow. Field technicians can swipe through maintenance processes on their mobile device as they are performing them, noting key observations as they go.

Illu's software for mobile and desktop **simplifies distributed solar maintenance** and **supercharges field technicians**. Workflow cards guide technicians through maintenance processes and track progress in real-time. Streamlined O&M dispatch with automation capabilities supports timely response and maximize First Contact Resolution, optimizing system performance and reducing Opex.

**Streamline job mgmt**  
Managers can easily delegate jobs and track remote work in real-time

**Supercharge field work**  
Workflows build competence and accountability across remote teams

**Automatic documentation**  
Real-time progress tracking reduces time for retroactive reporting
