

Bringing Everyone to A Better Table

(Team Forward Education & Technology)

Problems:

- Nearly all US States and Territories reported STEMS Teacher Shortages over the past 5 years.
- Students of color and students from rural areas are far less likely to have broadband access than others.
- Women, minorities and people from rural areas remain underrepresented in the STEM workforce.
- Student attention spans are declining.
- Students sit for 8 hours a day increasing health risks.
- Class design has been largely unchanged in over a century.
- The technology exists to change this with the aid of solar, but few creative solutions have been explored.

Our Solution:

- Gets everyone engaged to solve 21st century challenges w/STEMs
- Utilizing our patented and patent pending designs to revolutionize classroom design utilizing solar.
- Students will learn while moving, both at their own pace, keeping them engaged and healthy
- Educational software designed around students will be incorporated to make learning as addictive as gaming
- Limited teachers will be able to manage class sizes with the aid of AI assistants and alerts
- Wireless networks will be expanded to reach students through remote monitoring of solar-wifi devices statistics via application
